- 5. Technician Mobile App — How to Use
- 6. Role Cheat Sheet
- 7. Quick Reference & Support Notes

1. Executive Summary

This handover packages the completed **Workman Services ERP** web system and the companion **Technician Mobile** field app. Together they cover the full service loop: create and assign jobs, issue and return warehouse stock, buy materials through a controlled purchase process, and close work with accountant finalize plus auditor verification.

What you received is ready for day-to-day operations training. Screens below are captured from the live demo at <https://hvac-erp-bay.vercel.app/> (September 2026).

Area	What was built
Jobs	Multi-technician assignment, Change/reassign with successor work order, stock issue & return on the job, accountant finalize, auditor verification queue.
Warehouse	Stock levels, stock-on-job tracking, restock, branch movements, and storekeeper view for unused / returnable materials.
Procurement	Full path: Purchase Requisition → RFQ (competitive matrix, multi-PR packages) → Purchase Order → Goods Receipt (GRN) → 3-Way Match → Payments. Linked to the chart of accounts on GRN, match, and pay.
Mobile	Field work orders with accept (including batch), multi-tech visibility, reassigned banner with successor link, Need parts + Parts / PR hub.

Figure. Dashboards Hub — starting point after login. Sidebar shows Jobs, Procurement, Warehouse, Accounts, and Field Companion.

2. Jobs Module — How to Use

Open **Jobs** → **Jobs Directory** (or go to </jobs>). The directory lists every work order with customer, type, technician, status, and amount. Use tabs such as **All Jobs**, **Assigned Today**, **Needs Review**, and **Completed** to focus the queue.

JOB # & EXTERNAL REF	CUSTOMER	JOB TYPE	TECHNICIAN	STATUS	AMOUNT	CREATED

Figure. Jobs Directory — filter by technician / status / type. Use **Change** next to a technician to reassign or add assistants. Open **Details** for the full work order.

2.1 Create and assign a job

Steps

1. Click **+ New Job**. Pick or add the customer, site address, job type, and planned line items.
2. Save the job, then assign a **lead technician**. Optionally tick **assistant technicians** so several people can work the same job on mobile.
3. Technicians receive the job on the Field Companion / mobile app and can accept it there.

2.2 Multi-technician & reassign → successor

One job can have a **lead** plus **assistants**. Assistants also see and accept the job in the mobile app. If work has already started and you need a different technician, use **Change / Reassign**. The system creates a **linked successor work order** for the new technician, marks the old job as reassigned, and keeps the history. On the list and mobile, you can open the successor directly.

Figure. Reassign / Update Technicians drawer — pick a lead, optionally add assistants, then Assign. If the job is already in progress, confirmation creates a successor work order.

2.3 Stock on the job, returns, finalize & verify

On the work order screen you can **Issue Warehouse Stock**, **Record Stock Return**, add services, apply a mid-job discount (accountant), and print the tax invoice. The reconciliation cards show **Planned, Installed / Used, Unused / Left** (with returned quantity), and the net invoice total.

When field work is done, the job moves to **Pending Verification**. The accountant completes settlement (hisaab) and taps **Finalize** to lock the record. Finalized jobs then appear in **Jobs** → **Auditor Verification**. The auditor runs the checklist and marks the job **Verified** (terminal).

Figure. Work order JOB-2026-0019 — Pending Verification. Note Issue Warehouse Stock, Record Stock Return, and Unused / Left with Returned units. Lifecycle timeline is on the right.

Figure. Auditor Verification Queue — only **Finalized** jobs appear here. Jobs still waiting on the accountant stay in Pending Verification until finalize.

3. Inventory / Warehouse — How to Use

Open **Warehouse & Stock** (*/inventory*). KPI cards show warehouse stock, stock currently on jobs, total materials, predefined services, and reorder alerts.

Figure. Warehouse & Stock — Stock Levels tab with catalog filters: All, Physical, Services, On Job, Low. Actions: Add Service, New Material, Restock Item.

3.1 Issue stock to a job

Steps

1. From the job work order, click **+ Issue Warehouse Stock** and choose materials/quantities.
2. Issued units move from warehouse into **Stock on Job / Field** (visible in Warehouse KPIs and the On Job filter).
3. Technicians can also request parts from the mobile app; the storekeeper fulfils those requests in ERP.

Figure. On Job filter — materials currently held by field technicians (warehouse vs stock-on-job columns).

3.2 Unused / returnable stock (storekeeper)

When a job is paused or completed, leftover issued materials become **unused / returnable**. Storekeepers use the Jobs directory **Unused / Returnable Stock** focus (role-aware) and the work-order **Record Stock Return** action to bring materials back after physical inspection. Returned quantities update warehouse levels and the job's Unused / Left card.

Storekeeper checklist

1. Review jobs with returnable quantities (or open the job and check Unused / Left).
2. Physically count returned items, then acknowledge / record the stock return in ERP.
3. Use **Restock Item** or procurement (PR) when warehouse levels hit reorder alerts.

3.3 Branches & movements

The **Branches & Movements** tab shows depot stock (e.g. Lahore HQ, Karachi, Islamabad, Faisalabad) and lets you dispatch stock between branches or log workshop consumption.

Figure. Branches & Movements — multi-depot on-hand units and inter-branch transfer form.

4. Procurement — How to Use

Open **Procurement & Sourcing** (/procurement). The hub tracks the full buy cycle with tabs: Approvals · Requisitions · RFQ · Purchase Orders · Goods Receipt · 3-Way Match · Payments · Vendors · Reports.

Figure. Procurement hub — Pending PRs, Open Orders, Approvals Inbox, Overdue Deliveries. Requisitions list with Approve / Create PO actions.

4.1 The buy path (simple language)

1. PR	2. RFQ	3. PO	4. GRN	5. 3-Way	6. Pay
Ask for materials (store / site / job)	Invite vendors & compare quotes	Official order to winner	Receive goods into warehouse	Match invoice to PO + GRN	Settle vendor bill

How to run a purchase

1. **Create Purchase Requisition** (or approve one raised by storekeeper / site / technician). Target can be STORE, SITE, or a job.
2. For competitive buys, open **RFQ** → **Create RFQ Sourcing Package**. You can group lines from one or more PRs, invite vendors, enter quotes, and award the winner. The system can generate the PO automatically.
3. Approve the **Purchase Order**, then when goods arrive open **Goods Receipt** and post a GRN against the PO (stock + ledger).
4. In **3-Way Match**, enter the supplier invoice and match it to the PO and GRN. Clear variance, then **Pay Bill** under Payments.

Figure. RFQ competitive matrix — side-by-side vendor quotes, lowest-price highlight, award → generated PO.

Figure. Purchase Orders — draft / approve, fulfilment progress (received vs ordered), order value.

Figure. Goods Receipt (GRN) — PO reference, warehouse location, challan, items received, GL posting status.

Figure. 3-Way Match — supplier invoice linked to PO & GRN, variance audit, Approved for Payment → Pay Bill.

4.2 Chart of Accounts (brief)

Procurement posts into the company ledger automatically at the right steps: receiving goods (inventory / GR-IR clearing), matching the supplier bill (accounts payable), and paying the vendor (bank / cash). You do not need to journal by hand for the standard PR→PO→GRN→Pay path. Accounts & Ledgers remains available for review and reconciliation.

5. Technician Mobile App — How to Use

Technicians use the **Workman Mobile** field app (also previewable in ERP under **Field Companion**). The home screen shows Field Work Orders filtered by All / Assigned / Active / Paused / Done.

Figure. Field Companion / mobile home — new job dispatch banner, Accept Job on assigned cards, Active On-Site for accepted work, bottom tabs for Jobs · Attendance · Staff ESS.

5.1 Accept work (including batch)

Steps

1. When a job is dispatched, a banner appears (**New Job Dispatched!**). Tap **Review** or open the card.
2. Tap **Accept Job**. For several waiting assignments, use batch accept so the technician can clear the Assigned queue in one go.
3. On site, continue with start / pause / complete flows. Pause may require return checklist and settlement notes as per policy.

5.2 Multi-tech & reassigned banner

If the job has a lead and assistants, each assigned technician sees the work order with their role (lead / assistant). If office reassigns an in-progress job, the old card shows a clear **“This job was reassigned”** banner. Historical data stays; the technician opens the **successor** work order number to continue.

5.3 Parts & purchase request hub

Steps

1. On an active job, use **Need parts** to request warehouse issue for that job.
2. Open **Parts hub** for a wider materials view, or raise a simple **Material PR** (purchase requisition without pricing) when stock must be bought — warehouse issue for an active job still goes through Need parts.
3. Office / purchasing then processes the PR in the ERP procurement module.

6. Role Cheat Sheet

Use this as a one-page training aid. Permissions in ERP follow the user's role; menus and buttons appear accordingly.

Storekeeper

Focus: Warehouse stock accuracy and job material flow.

Typical actions: Restock & catalog; fulfil technician inventory requests; issue stock to jobs; inspect and acknowledge **unused / returnable** stock; raise PRs when levels are low; help with GRN receiving.

Purchasing

Focus: Buying materials at the right price and time.

Typical actions: Approve / convert PRs; build RFQ packages (including multi-PR); award vendors; create and approve POs; track overdue deliveries; work with vendors master.

Accountant

Focus: Money in, money out, and job lock.

Typical actions: Job hisaab / collections & discounts; expense reimbursement; **Finalize** completed jobs; 3-way match and vendor **Pay Bill**; review Accounts & Ledgers.

Manager / Dispatcher

Focus: Who does which job, and is it on track?

Typical actions: Create jobs; assign lead + assistants; reassign (successor); watch Dashboards & Live Dispatch Map; export job lists; oversee Needs Review.

Auditor

Focus: Independent close-out of finalized jobs.

Typical actions: Open **Auditor Verification**; confirm work, payment, and stock returns checklist; Verify (or send back with a note). Does not silently edit a locked job.

Technician

Focus: Do the fieldwork on mobile.

Typical actions: Accept (batch) jobs; navigate to site; log parts / Need parts / Parts hub & Material PR; pause / complete with actuals; follow reassigned → successor banner when office changes the crew.

7. Quick Reference & Support Notes

Key screens (demo)

Jobs Directory	https://hvac-erp-bay.vercel.app/jobs
Auditor Verification	https://hvac-erp-bay.vercel.app/jobs/verification
Warehouse & Stock	https://hvac-erp-bay.vercel.app/inventory
Procurement	https://hvac-erp-bay.vercel.app/procurement
Field Companion	https://hvac-erp-bay.vercel.app/mobile
Accounts & Ledgers	https://hvac-erp-bay.vercel.app/accounts

Suggested training order

1. Manager creates a sample job and assigns lead + one assistant.
2. Technician accepts on mobile, requests parts; storekeeper issues and later records a partial return.
3. Storekeeper raises a PR for a low-stock item; purchasing runs RFQ → PO; warehouse posts GRN; accountant matches and pays.
4. Technician completes job; accountant finalizes; auditor verifies.

Thank you. This document is the client-facing handover for the Jobs, Inventory, Procurement, and Technician Mobile modules delivered in September 2026. For walkthroughs on the live demo or user training sessions, coordinate with your OMNYSYNC delivery contact.
